

Amendments to the Abstract:

Please replace the abstract with the following rewritten abstract:

A method for generating an object processing platform between an object computer and a processing computer, where an ad hoc assembly of screens is performed by the object computer with the processing computer in order to couple their input and/or output device. The invention includes generating an object processing platform between an object computer and a processing computer. An ad hoc screen assembly is performed by the object computer with the processing computer in order to couple their input and/or output means with at least one display.
